

## QA Technician (FAI & Testing)

### OVERVIEW

The QA Technician is responsible for assisting in measurement activities, preparing reports, and ensuring proper documentation and filing of analysis records. This role supports quality assurance through First Article Inspection (FAI), testing, calibration, and compliance with company quality and environmental systems.

### KEY RESPONSIBILITIES

- Perform First Article Inspection (FAI) and prepare customer reports
- Conduct measurements and testing as per requisition
- Carry out Measurement System Analysis (GR&R for equipment, new parts, and cosmetic inspection)
- Monitor SPC charts (X bar, R chart) for critical dimensions
- Perform and monitor MFI tests
- Coordinate and arrange equipment calibration, ensuring traceability and proper documentation
- File calibration reports/certificates accurately
- Assist in layout inspection and functional testing for automotive parts annually
- Ensure compliance with quality, environmental, and safety procedures
- Report problems or deviations related to environmental issues to management

### QUALIFICATIONS

- Diploma/Degree/Technical Certificate in a related field
- Minimum 2 years' experience in a related role
- Basic inspector knowledge
- Good communication skills and ability to interact effectively
